SOME THINGS YOU SHOULD KNOW ABOUT THE WATCHES IN THIS CATALOG

1. ALL WATCHES SHOWN ARE SHOCK RESISTANT and meet the U.S. Government standard to withstand shock equal to a drop of three feet to a hardwood surface without substantial adverse effect.
2. All watches indicated as WATER-RESISTANT meet FTC standards of being capable at time of sale of enduring a test of submersion for five minutes under atmospheric pressure of 15 pounds per square inch and for five more minutes under additional pressure of 35 pounds per square inch without admitting any water. Ability to pass test assures that watch is protected against humid conditions and accidental immersion. Crystal, crown, and case must remain intact, so periodic checks are recommended.
3. BULOVA DURA-CRYSTAL® is a scratch-resistant mineral crystal offering maximum protection and distortion-free viewing.
4. All Day/Date models sold in U.S.A. have English/Spanish day discs. All Day/Date models sold in Canada have English/French day discs.
5. All Caravelle watches are made with a stainless steel back.
6. All prices quoted are subject to change without notice.

1990/1991

CARAVELLE

by BULOVA®

WHEN CARAVELLE was just introduced, gold was \$35 an ounce and watches had mainsprings. Throughout the nation, watch retailers found cause for applause. People who rarely ventured near jewelry counters came to buy Caravelle; for here was a quality made brand name watch, guaranteed by Bulova and priced amazingly low.

Times have changed. And so have watches. But the standards set for Caravelle remain constant. The pledge is the same: To provide the retailer with a line of beautifully engineered watches, high in fashion, diverse in style and affordable to all.

Proper use and care of water-resistant watches

Almost all Caravelle by Bulova quartz watches are water protected and meet Federal Trade Commission standards. Watches designed for deep sea and underwater use face even more stringent tests to meet those specific FTC rules.

A small portion of Caravelle quartz watches, created primarily for dress wear, do not have the essential seals and gaskets and are categorized as *non* water-resistant.

Water-resistant Caravelle quartz watches are easily identified by the words "WATER RESISTANT" on the dial or etched on the back of the case. With the super water-resistant Deep Sea models or divers' watches, the depth-tested maximum (330 or 660 feet) will appear on the watch dial and/or case back.

Water-resistancy varies with each type of watch. Caution your customer accordingly:

Non Water-resistant: Avoid all contact with water. Remove watch from wrist before washing, showering or doing dishes, etc. Shield against rain. If condensation occurs, simply warm the crystal by covering it with your hand. If "fogging" remains, store the watch for a day or two in a warm, dry place.

Water-resistant: Capable of withstanding all ordinary moisture involved in daily use. Protected against *accidental* exposure or immersion in water. If wet, wipe dry *immediately*. Wipe with a clean, moist cloth if in contact with salt water. Do not wear when showering or swimming.

Deep Sea Models: Water-resistant to a depth of 330 feet/10 ATM or 660 feet/20 ATM. Designed for wear while swimming, skin-diving, scuba-diving, snorkeling, etc. *provided* case, crystal and crown remain intact and case has been unopened. Should be checked at least once a year by a competent watch repair technician to ensure that water-resistancy is at its optimum.

Screw-down Crown Models: In order to insure water-resistancy on screw-down crown models the following precautions must be taken: To set watch, turn crown towards you until threads disengage, then set watch. To reseal, press crown in and turn away from you until threads engage and until crown is tight.

Precautions to take when replacing power cells

The retailer who provides an efficient battery replacement service can command greater in-store traffic, repeat customers, increased sales and profits . . . provided his personnel are trained to do the job properly. The procedure is comparatively simple, but precautions must be taken to avoid any replacement problems.

- 1. Make sure the work area is immaculate**, totally free of dust, dirt, grime and metallic slivers, *before* you open the watch case. Should any such residue enter the case, it could cause movement stoppage.
- 2. Remove exhausted power cells as soon as possible** to prevent leakage and damage to the movement or dial. This applies not only to your customer's watch, but to stock watches as well.
- 3. Caution your customer to have power cells removed** if the watch is to be stored away for an extensive length of time.
- 4. Always handle power cells with a plastic tweezer.** A metal tweezer can cause accidental short circuiting or power cell drain.
- 5. Always use the manufacturer's recommended power cell:** substitute cells may cause malfunction or damage to the watch. If a watch functions on *two* power cells, replace both at the same time. Test the new batteries for proper voltage.

Caravelle Power Cell Guide

PLEASE NOTE: Model number is repeated when more than one calibre with different power cell is used. A missing calibre number indicates that only the listed power cell number is used.
